## More Portability for Your Files

### Solve Your Data Transfer and Security Problems

Generically referred to as "USB keys" or "data-fobs", these handy and inexpensive little devices can solve myriad data transfer and security problems. They are conveniently cross-platform formatted so they can easily be used to move your files from Macs® to Windows® machines and vice versa. You just plug them in and they mount on your machine's desktop like a floppy or a Zip® disk. Use USB keys to safely carry your current day's work from your office computer to your home computer and back again, or to carry confidential or ultra-personal documents that you might never want to leave on a hard drive where others have access to them.
